

Results for Brandywine'S Red Freckles

Brandywine'S Red Freckles's genetic health profile:

- ✓ Brandywine'S Red Freckles is **at-risk** for the following 1 disease:
 - [Multidrug resistance 1](#)
- ✓ Brandywine'S Red Freckles is not a carrier for any of the diseases tested

Brandywine'S Red Freckles's appearance profile:

- ✓ Brandywine'S Red Freckles is a **Female**
- ✓ Brandywine'S Red Freckles's coat is likely **Long** and **Brown with tan points** in color
- ✓ Brandywine'S Red Freckles's face likely **Has No Mask on the Muzzle** and a **Brown** nose
- ✓ Brandywine'S Red Freckles's tail is likely **Normal** in length

Explanation of Results

- Normal** A "normal" result means that your dog does not have the mutation that causes the associated genetic disease.
- Carrier** A "carrier" result indicates that your dog may have inherited one copy of the mutation that has been reported to cause this genetic disease. Your dog is not clinically affected by this mutation because two copies of the mutation are required to cause this disease.
- At-Risk** An "at-risk" result indicates that your dog may have inherited one or two copies of the mutation that has been reported to cause this genetic disease. Depending on the mode of genetic inheritance for this particular disease, inheriting one **or** two mutant copies of the gene may result in the disease.

You may want to consider ordering follow-up testing to confirm the results of this initial screen for any dog that is "at-risk" for a disease.
